

Description

The A2B2E2K2P3 combined filter is designed to provide reliable respiratory protection against a broad spectrum of hazardous substances, including organic vapours, inorganic gases, acid gases, ammonia, and solid and liquid particles. Manufactured in accordance with EN 14387, it ensures high filtration efficiency and optimal performance when used with compatible reusable respirators. Its robust construction and high-capacity filtration media make it suitable for demanding industrial environments where effective respiratory protection is essential.

Features

Material	ABS
Protection type	CLASS 2
Standard	EN 14387:2004 + A1:2008 EN 143:2000
